SAVING THE SEAS

06.05.2011

Radically reduced fish stocks, a third of the world's coral destroyed, 405 "dead zones" and plastic garbage everywhere. The ocean - more than 99 percent of the living space on Earth – is in real danger, and something has to be done right now. PopSci suggests 7 ways to save our seas, from controlling invasive species to reducing fertilizer and sewage runoff causing marine pollution (via Wired.it).
